ID	Requirement	MoSCoW Category	Impact on Users & Stakeholders (1-5)	Feasibility: Time / Budget / Resources (1-5)	Priority Score	Impact Rationale	Feasibility Rationale	Justification for Category	Suggested Release
R1	Search books by title and author	**Must-Have**	5	5	#REF!	Every member and librarian needs to find books; it is the most frequent action in the system.	Standard database query/indexing; low effort, no extra cost or third-party tools.	Without search, the catalog is unusable. High impact and very easy to build, so it is core to the MVP.	Release 1 (MVP)
R2	Online book reservation system	**Must-Have**	5	4	#REF!	Lets members reserve borrowed or popular books remotely; reduces queues and manual work for staff.	Needs reservation queue and availability logic, but is a well-understood web feature within normal budget.	Online access is a central purpose of a modern library system and a key stakeholder expectation.	Release 1 (MVP)
R3	Monthly borrowed-books reports for administrators	**Should-Have**	4	4	#REF!	Supports collection planning, budgeting and usage audits; not needed for daily circulation.	Aggregation queries plus export (PDF/Excel); moderate effort once borrowing data exists.	Important to administrators, but the system can run without it at launch. Can be done manually at first.	Release 2
R4	Email notifications for overdue books	**Should-Have**	4	4	#REF!	Improves on-time returns and reduces lost books and manual follow-up calls.	Needs scheduled jobs and an email service (SMTP/SendGrid); low recurring cost.	High value and affordable, but staff can send reminders manually in the short term.	Release 2
R5	QR code scanning for borrowing and returning	**Could-Have**	3	3	#REF!	Speeds up checkout and cuts errors, but barcode/manual entry already achieves the same result.	Needs QR generation/labelling for all books, scanners or camera integration; moderate cost and rollout effort.	A nice efficiency gain, not essential. Add if time and budget remain after core features.	Release 3
R6	User-friendly dashboard for librarians	**Must-Have**	5	4	#REF!	Librarians use it daily to manage books, members, loans and reservations; poor UX hurts adoption.	Standard web UI work using common frameworks; achievable with the core team.	It is the main interface for the primary operators, so it must exist and be usable from day one.	Release 1 (MVP)
R7	Allow users to review and rate books	**Could-Have**	3	4	#REF!	Increases engagement and helps readers choose books, but does not affect core operations.	Simple CRUD plus average-rating calculation; low effort, but needs basic moderation.	Desirable community feature with easy build, yet no stakeholder depends on it. Deferred behind core needs.	Release 3
R8	Integrate a chatbot for user assistance	**Won't-Have**	2	2	#REF!	Helpful for FAQs, but search and a clear UI cover most user needs; limited incremental impact.	Requires NLP/AI integration, training content, ongoing tuning and possibly licensing; high cost and effort.	Low impact relative to cost and complexity. Excluded from this release; revisit later.	Future (not this release)

ID	Requirement	MoSCoW Category	Impact on Users & Stakeholders (1-5)	Feasibility: Time / Budget / Resources (1-5)	Priority Score	Impact Rationale	Feasibility Rationale	Justification for Category	Suggested Release
R9	Develop a mobile app version	**Won't-Have**	4	1	#REF!	Convenient for members, but a responsive web app already provides mobile access.	Separate iOS/Android development, app-store processes and extra maintenance; largest budget and time demand.	Impact is real but feasibility is poor within current constraints. Deliver a mobile-responsive website now; native app later.	Future (not this release)
R10	Multi-language support	**Could-Have**	3	3	#REF!	Valuable for diverse communities, but only if the user base needs it; unclear demand for launch.	Needs internationalization framework and translations; moderate effort, easier if planned from the start.	Beneficial but not critical. Build text with i18n-ready structure in MVP and add languages later.	Release 3

MoSCoW Summary

Category	Meaning	Count	Avg Impact	Avg Feasibility
Must-Have	Critical for launch; the system fails without it.	3	5.0	4.3
Should-Have	Important and valuable, but not vital for launch; workarounds exist.	2	4.0	4.0
Could-Have	Desirable if time and budget allow; low impact if left out.	3	3.0	3.3
Won't-Have	Agreed to be out of scope for this release; revisit later.	2	3.0	1.5
Total		**10**		

Scoring guide

• Impact (1-5): value to members, librarians and administrators (5 = essential to daily operations).

• Feasibility (1-5): ease of delivery given time, budget and team resources (5 = quick, low cost; 1 = very costly or complex).

• Priority Score = weighted average of Impact and Feasibility (weights editable on the analysis sheet).

• Category is a judgment call guided by the score: high impact + high feasibility = Must; high impact but harder/less urgent = Should; moderate = Could; low feasibility or low value for now = Won't (this release).

• Assumption: a small team and limited budget; a mobile-responsive website is assumed to cover mobile needs for now.
